PRODUCT DESCRIPTION

It may be small, but the compact Lopi Answer's size belies its incredible heating capacity. The Answer uses a five-sided convection chamber to distribute heat evenly throughout your home. Cool room air is naturally drawn around the hot firebox, heated, and returned back into the room without using a blower. The Answer's .05 cubic metre firebox is larger than most other small stoves, so it offers longer burn times with less reloading. It's a powerful heater for its size, yet the back wall clearance is just 200mm to a combustible surface.

Options

Greenstart

The GreenStart igniter has made getting your fire burning as convenient as pushing a button. Additionally all of the mess of starting a fire with matches and newspapers is no longer part of the process. The new GreenStart system instantly elevates combustion temperatures within your stove, immediately establishes a draft and eliminates the slow and smoky typical wood fireplace start up. Never before has getting your wood fire burning been so simple.

Optional Fan - additional cost

Outside Air Kit

Ideal for air tight homes as it allows the air to be drawn from outside of the home to the fireplace.
