PRODUCT DESCRIPTION

The Answer 2020 Inbuilt is a great size for small existing fireplaces. It's size belies its incredible heating capacity. The Answer Inbuilt uses a five-sided convection chamber to distribute heat evenly throughout your home. Cool room air is naturally drawn around the hot firebox, heated, and returned back into the room without using a Fan. The Answer's .05 cubic metre firebox is larger than most other small inserts, so it offers longer burn times with less reloading. This model has a huge viewing area and sleek door design to make viewing and operating this insert easy and enjoyable.

Options

Greenstart

The GreenStart igniter has made getting your fire burning as convenient as pushing a button. Additionally all of the mess of starting a fire with matches and newspapers is no longer part of the process. The new GreenStart system instantly elevates combustion temperatures within your stove, immediately establishes a draft and eliminates the slow and smoky typical wood fireplace start up. Never before has getting your wood fire burning been so simple.

Fan Option

A front mounded 180 CFM fan can be added for an additional cost, to increase the convection heat. This fan is thermostatically controlled and fully variable.
