PRODUCT DESCRIPTION

This large fireplace insert features the exclusive clean burning *NexGen-Fyre Technology*. The result of this clean burning insert is emissions of just 1.0 grams with hardwood. Also with that reduction in emissions comes almost zero carbon monoxide remaining through all burn cycles. We are taking clean burning to an unmatched level of efficiency. What this means is more heat less wood, and greater savings on your heating costs! This insert will heat up to 300sqm, with up to 12 hours burn times.

The large fire box is 0.85 cubic metres in size and will accommodate a 610mm log. We have engineered this large insert so that it will indeed fit into many fireplace openings and is approved for both masonry and zero clearance fireplaces and also features a bypass damper for smoke free fire starting and reloading.

A large viewing area is accomplished by having a huge single cast iron door, giving the unit 319 sq. inches of glass. The glass stays clean from the unobstructed air wash.

The Flush Wood Large NexGen-Fyre Wood Insert comes standard with twin 90 CFM convection fans to increase heat output and efficiency. The rheostat controlling fan speed is located on the chosen face plate, not on the surround panel. And the power cord can be routed to either side of the appliance or hard wired inside the fireplace with our optional insert wiring kit.

Specifications

Construction	9.5 - 6mm Steel Plate
Firebox Size	.085 Cubic Metres
Installation Type	Masonry/Chimney - Option for Zero Clearance
GreenStart™ Compatible	Optional
Fan	Optional

Options

Greenstart

The GreenStart igniter has made getting your fire burning as convenient as pushing a button. Additionally all of the mess of starting a fire with matches and newspapers is no longer part of the process. The new GreenStart system instantly elevates combustion temperatures within your stove, immediately establishes a draft and eliminates the slow and smoky typical wood fireplace start up. Never before has getting your wood
