PRODUCT DESCRIPTION

The Real Flame Wonderfire is designed to best suit a period styled home. The natural gas fire will confidently supply warmth to a 45m² living space.

Specifications

Megajoules 45

Coverage 45m

The Heart of the Heat

We all enjoy the sight of a living, dancing fire, set in a traditional mantel fireplace. But there is the wood to chop, the fire to set and ash to clean. Unless of course you install a Wonderfire. A Wonderfire looks so real you could be forgiven for believing the coals or wood logs are real. In fact they are made of ceramics that not only look realistic but reach their maximum temperature in a matter of minutes. At its heart is a sophisticated ceramic venturi burner that proportions and premixes the gas to ensure complete combustion. At 1200oC it gives a real fire glow at the base of the coals or logs. The gases then pass through secondary slots, are mixed with more air and then burnt again to produce clean flames that dance and shimmer like a real log fire."It's a system that no other gas fire can match for warmth and effect".

Warmth at the push of the button

The Wonderfire offers the convenience of an electronic ignition system that incorporates a pilot light for ease of operation or you might also choose our optional remote control. Safety is also an important feature of the Wonderfire. A flame failure device automatically turns the gas off in the event of the fire going out.
